

# Selenium Cheat Sheet with Python

## Setup

Install Selenium	<code>pip install selenium</code>
------------------	-----------------------------------

## WebDriver Setup

Chrome	<code>webdriver.Chrome(executable_path="path/to/chromedriver")</code>
Firefox	<code>webdriver.Firefox(executable_path="path/to/geckodriver")</code>

<b>Microsoft Edge</b>	<code>webdriver.Safari(executable_path="path/to/safaridriver")</code>
<b>Safari (Only Mac)</b>	<code>webdriver.Edge(executable_path="path/to/msedgedriver")</code>

## PyTest

<b>Install Pytest</b>	<code>pip install pytest</code>
<b>Basic Test</b>	<pre>import pytest def test_example():     assert 1 + 1 == 2</pre>
<b>Run Tests</b>	<code>pytest test_file.py</code>

<b>Run Specific Test</b>	<code>pytest -k "test_name"</code>
<b>Run Tests in a Directory</b>	<code>pytest tests/</code>
<b>Markers</b>	<code>@pytest.mark.smoke def test_smoke_case():     assert True</code>
<b>Run Specific Marker</b>	<code>pytest -m smoke</code>

## Unittest

<b>Import Unittest</b>	<code>import unittest</code>
<b>Create a Test Case</b>	<code>class TestExample(unittest.TestCase):     def test_addition(self):         self.assertEqual(1 + 1, 2)</code>

<b>Run Tests</b>	<pre>python -m unittest test_file.py</pre>
<b>Setup and Teardown</b>	<pre>class TestExample(unittest.TestCase):     def setUp(self):         # Setup code pass      def tearDown(self):         # Teardown code pass</pre>
<b>Run All Tests in a Directory</b>	<pre>python -m unittest discover tests/</pre>
<b>Assert Methods</b>	<pre>assertEqual(a, b) assertNotEqual(a, b) assertTrue(x) assertFalse(x) assertIs(a, b) assertIsNot(a, b)</pre>

## Locators

<b>By ID</b>	<pre>driver.find_element(By.ID, "id_value")</pre>
--------------	---

<b>By Name</b>	<code>driver.find_element(By.NAME, "name_value")</code>
<b>By Class Name</b>	<code>driver.find_element(By.CLASS_NAME, "class_value")</code>
<b>By Tag Name</b>	<code>driver.find_element(By.TAG_NAME, "tag_value")</code>
<b>By Link Text</b>	<code>driver.find_element(By.LINK_TEXT, "link_text_value")</code>
<b>By Partial Link Text</b>	<code>driver.find_element(By.PARTIAL_LINK_TEXT, "partial_link")</code>
<b>By CSS Selector</b>	<code>driver.find_element(By.CSS_SELECTOR, "css_selector")</code>
<b>By XPath</b>	<code>driver.find_element(By.XPATH, "xpath_value")</code>

# Interactions

Click an Element	<pre>button = driver.find_element(By.ID, "button_id") button.click()</pre>
Input Text	<pre>element = driver.find_element(By.ID, "input_id") element.send_keys("Your text")</pre>
Clear Text	<pre>element.clear()</pre>
Submit a Form	<pre>form = driver.find_element(By.ID, "form_id") form.submit()</pre>

# Waits

Implicit Wait	<pre>driver.manage().timeouts().implicitlyWait(Duration.ofSeconds(10));</pre>
---------------	---

<b>Explicit Wait</b>	<pre>WebDriverWait wait = new WebDriverWait(driver, Duration.ofSeconds(10)); WebElement element = wait.until(ExpectedConditions.visibilityOfElementLocated(By.id("elementId" )));</pre>
----------------------	---

## Handling Alerts

<b>Switch to Alert</b>	<code>alert = driver.switch_to.alert</code>
<b>Accept Alert</b>	<code>alert.accept()</code>
<b>Dismiss Alert</b>	<code>alert.dismiss();</code>
<b>Get Alert Text</b>	<pre>alert_text = alert.text print(alert_text)</pre>

## Handling Frames

<b>Switch to a Frame</b>	<pre>driver.switch_to.frame("frame_name_or_id")</pre>
<b>Switch to a Frame by Name or ID</b>	<pre>driver.switch_to.frame("frame_name_or_id")</pre>
<b>Switch to a Frame by Index</b>	<pre>driver.switch_to.frame(0)</pre>
<b>Switch to a Frame using a WebElement</b>	<pre>frame_element = driver.find_element(By.XPATH, "//iframe[@id='frame_id']") driver.switch_to.frame(frame_element)</pre>
<b>Switch to Parent Frame</b>	<pre>driver.switch_to.parent_frame()</pre>

<b>Switch to Default Content</b>	<code>driver.switch_to.default_content()</code>
----------------------------------	---

## Handling Dropdowns

<b>Select by Visible Text</b>	<code>dropdown = Select(driver.find_element(By.ID, "dropdown_id"))</code> <code>dropdown.select_by_visible_text("Option Text")</code>
<b>Select by Index</b>	<code>dropdown.select_by_index(2)</code>
<b>Select by Value</b>	<code>dropdown.select_by_value("option_value")</code>

## Browser Navigation

<b>Navigate to URL</b>	<code>driver.get("https://example.com")</code>
------------------------	--

<b>Back</b>	<code>driver.back()</code>
<b>Forward</b>	<code>driver.forward()</code>
<b>Refresh Page</b>	<code>driver.refresh()</code>
<b>Close Current Window</b>	<code>driver.close()</code>
<b>Quit Entire Session</b>	<code>driver.quit()</code>

## Browser Window Management

<b>Get the Current</b>	<code>current_window = driver.current_window_handle</code>
------------------------	--

<b>Window Handle</b>	
<b>Get All Window Handles</b>	<code>all_windows = driver.window_handles</code>
<b>Switch to a Specific Window</b>	<code>driver.switch_to.window(window_handle)</code>
<b>Switch to the Newly Created Window</b>	<code>driver.switch_to.window(driver.window_handles[-1])</code>
<b>Fullscreen Window</b>	<code>driver.fullscreen_window()</code>

<b>Minimize Window</b>	<code>driver.minimize_window()</code>
<b>Maximize Window</b>	<code>driver.maximize_window()</code>
<b>Get Window Size</b>	<code>size = driver.get_window_size()</code>
<b>Set Window Position</b>	<code>driver.set_window_position(100, 200)</code>

## Cookies

<b>Add Cookie</b>	<code>cookie = {"name": "test_cookie", "value": "cookie_value"} driver.add_cookie(cookie)</code>
-------------------	--

<b>Get All Cookies</b>	<code>cookies = driver.get_cookies()</code>
<b>Delete Cookie</b>	<code>driver.delete_cookie("test_cookie")</code>
<b>Delete All Cookie</b>	<code>driver.delete_all_cookies()</code>

## Taking Screenshot

<b>Full Page</b>	<code>driver.save_screenshot("full_page_screenshot.png")</code>
<b>WebElement Screenshot</b>	<code>element = driver.find_element(By.ID, "element_id")</code> <code>element.screenshot("element_screenshot.png")</code>

## Working with Files

<b>Upload a File</b>	<pre>file_input = driver.find_element(By.ID, "file_upload_id") # Replace with the actual locator file_input.send_keys("/path/to/your/file.txt")</pre>
<b>Read Data from a Text File</b>	<b>Read Entire File Content</b>  <pre>with open("example.txt", "r") as file:     content = file.read()     print("File Content:")     print(content)</pre>
	<b>Read File Line by Line</b>  <pre>with open("example.txt", "r") as file:     for line in file:         print("Line:", line.strip())</pre>
	<b>Use File Data in Selenium</b>  <pre>with open("test_data.txt", "r") as file:     data = file.readlines()</pre>

<b>Read Data from a CSV File</b>	<pre>import csv  # Read the entire CSV file with open("example.csv", "r") as file:     reader = csv.reader(file)     for row in reader:         print("Row:", row)</pre>
<b>Read Data from an Excel File</b>	<p><b>Using openpyxl</b></p> <pre>pip install openpyxl</pre> <pre>from openpyxl import load_workbook # Load the workbook workbook = load_workbook("example.xlsx")  # Select the active worksheet sheet = workbook.active  # Read all rows for row in sheet.iter_rows(values_only=True):     print(row)</pre>

	<p><b>Using pandas</b></p> <p><b>pip install pandas</b></p> <pre>import pandas as pd # Load the Excel file data = pd.read_excel("example.xlsx")  # Iterate over rows for index, row in data.iterrows():     print(f"Row {index}: {row}")</pre>
--	--

# JavaScript Execution

<p>Execute JavaScript</p>	<pre>driver.execute_script("JavaScript code here")</pre>
<p>Disable a Field (set the 'disabled</p>	<pre>driver.execute_script("arguments[0].setAttribute('disabled', 'true')", field)</pre>

ed' attribut e)	
Enable a Field (remov e the 'disabl ed' attribut e)	<code>driver.execute_script("arguments[0].removeAttribute('disabled')", field)</code>

## Selenium Grid

Start Hub	<code>java -jar selenium-server.jar hub</code>
Start Node	<code>java -jar selenium-server.jar node --hub http://localhost:4444</code>

Server	<code>http://localhost:4444/ui</code>
--------	---------------------------------------

## Best Practices

- Use explicit waits over implicit waits for better performance.

Handle exceptions to avoid flaky tests:

try:

```
element = driver.find_element(By.ID, "nonexistent_id")
```

except Exception as e:

- `print("Error:", e)`
- Always quit the WebDriver:  
`driver.quit()`
